

IN THE CLAIMS:

1. (previously presented) A fuel delivery unit having a surge pot and a fuel pump which is fastened in the surge pot, having a fuel filter and having a sealing connection of the fuel filter to the surge pot and to the fuel pump, characterized in that a filter material (13) almost completely fills a space between the surge pot (3) and the fuel pump (4).
2. (previously presented) The fuel delivery unit as claimed in claim 1, characterized in that the filter material (13) is connected to the surge pot (3) in a cohesive fashion.
3. (previously presented) The fuel delivery unit as claimed in claim 1 or 2, characterized in that the filter material (13) is injection-molded into the surge pot (3).
4. (currently amended) The fuel delivery unit as ~~claimed in at least one of the preceding claims, characterized in that~~ defined in claim 1, wherein the filter material (13) is embodied as damping material of the fuel pump (4).
5. (currently amended) The fuel delivery unit as ~~claimed in at least one of the preceding claims, characterized in that~~ defined in claim 1, wherein the filter material (13) of the fuel filter (6) has a recess (14) for directly holding the fuel pump (4).
6. (currently amended) The fuel delivery unit as ~~claimed in at least one of the preceding claims, characterized in that~~ defined in claim 1, wherein the fuel pump (4) has an interference fit in the recess (14) of the filter material (13).
7. (currently amended) The fuel delivery unit as ~~claimed in at least one of the preceding claims, characterized in that~~ defined in claim 1, wherein the filter material (13) has a sponge-like structure.

8. (currently amended) The fuel delivery unit as ~~claimed in at least one of the preceding~~
~~claims, characterized in that~~ defined in claim 1, wherein the filter material (13) is plugged into
the surge pot (3).

9. (currently amended) The fuel delivery unit as ~~claimed in at least one of the preceding~~
~~claims, characterized in that~~ defined in claim 7, wherein the filter material (13) is produced from
open-cell metal foam.

10. (currently amended) The fuel delivery unit as ~~claimed in at least one of the preceding~~
~~claims, characterized in that~~ defined in claim 7, wherein the filter material (13) is produced from
polymer foam.
